

Visualisation using Knowledge Assisted Sparse Interaction

Eduard Gröller

Institute of Computer Graphics and Algorithms
Vienna University of Technology

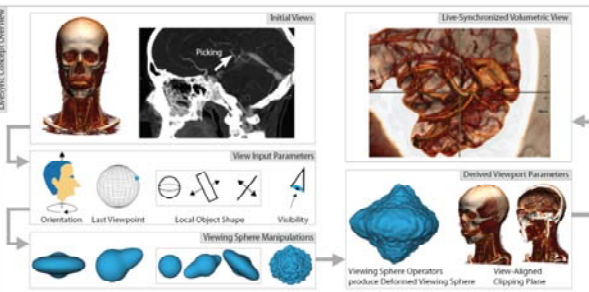

Overview of Presentation

- Knowledge-Assisted Visualization
 - ◆ LiveSync: Knowledge-Based Navigation
 - ◆ Contextual Picking
 - ◆ Knowledge-Assisted Sparse Interaction
 - ◆ Semantics Driven Illustrative Rendering
- Smart Super Views

Eduard Gröller

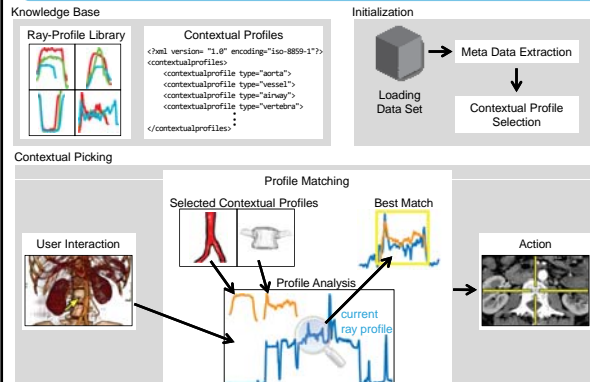

LiveSync: Knowledge-Based Navigation

- Interaction with 2D slices
- Automatic generation of expressive 3D views

Eduard Gröller

Contextual Picking - Overview

Knowledge Base

Ray-Profile Library

Contextual Profiles

```
<?xml version="1.0" encoding="iso-8859-1"?>
<contextualprofiles>
  <contextualprofile type="aorta">
    <contextualprofile type="vessel">
      <contextualprofile type="airway">
        <contextualprofile type="vertebra">
          ...
        </contextualprofile>
      </contextualprofile>
    </contextualprofile>
  </contextualprofiles>
```

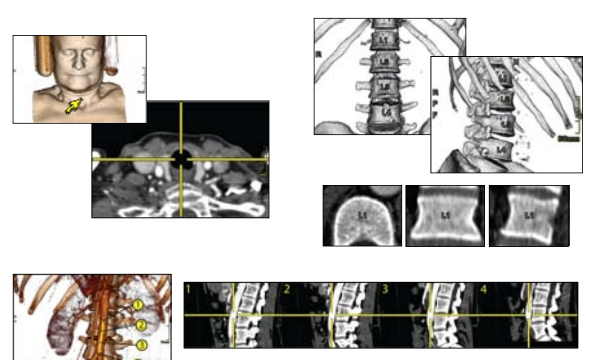

Initialization

Loading Data Set → Meta Data Extraction → Contextual Profile Selection

Contextual Picking

User Interaction → Profile Matching (Selected Contextual Profiles, Best Match, Profile Analysis, current ray profile) → Action

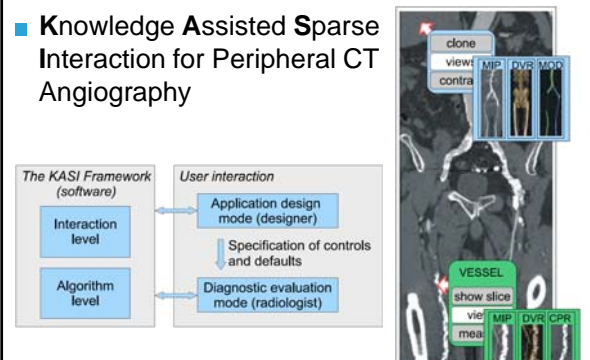

Contextual Picking - Results

Peter Kohlmann

KASI Project

Algorithm level

User interaction

Application design mode (designer)

Specification of controls and defaults

Diagnostic evaluation mode (radiologist)

clone, view, contra, MIP, DVR, MPR, VESSEL, show slice, vie, mea, MIP, DVR, CPR

Eduard Gröller

Semantics Driven Illustrative Rendering

if penetration depth is low and distance to focus is low
then skin-style is transparent white

if penetration depth is high or distance to focus is high
then skin-style is pink

if distance to plane is low
then skin-style is transparent blueish and glossy green is low

if distance to plane is high
then skin-style is opaque pink and glossy green is transparent

Video

Overview of Presentation

- Knowledge-Assisted Visualization
 - ◆ LiveSync: Knowledge-Based Navigation
 - ◆ Contextual Picking
 - ◆ Knowledge-Assisted Sparse Interaction
 - ◆ Semantics Driven Illustrative Rendering
- Smart Super Views

Eduard Gröller 7

Smart Super Views - Motivation (1)

- A Knowledge-Assisted Interface for Medical Visualization

PACS workstation

- Additional monitor
- Internet connection
- Supporting
- Diagnostic monitors
- Predefined set of visualizations
- User must choose

Gabriel Mistelbauer, Eduard Gröller 8

Smart Super Views - Motivation (2)

Slice Views: Axial, Coronal, Sagittal

Curved Planar Reformation Views: CPR, mpCPR

MIP, MIDA, DVR

Gabriel Mistelbauer 9

Smart Super Views - Motivation (3)

- Currently
 - ◆ a lot of views
 - ◆ always shown, even if not applicable
- Goals
 - ◆ only relevant views
 - ◆ shown if suitable

Gabriel Mistelbauer 10

Outline (1)

GO, MIDA

highly relevant

not relevant

Sagittal slice, Coronal slice

Video

Gabriel Mistelbauer 11

Outline (2)

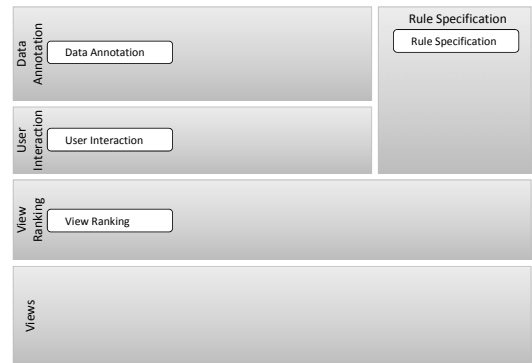

- Views depend
 - on user interaction
 - on the region under the cursor
- Views interactively provided
- Selection of a view for detailed inspection

➔ Image becomes the user interface

Gabriel Mistelbauer

12

Smart Super Views

14

Data Annotation (1)

Gabriel Mistelbauer

15

Data Annotation (2)

Gabriel Mistelbauer

16

Smart Super Views

Gabriel Mistelbauer

17

Rule Specification (1)

- Relations between input and output
- User-defined rules
- If-then clauses

Gabriel Mistelbauer

18

Rule Specification (2)

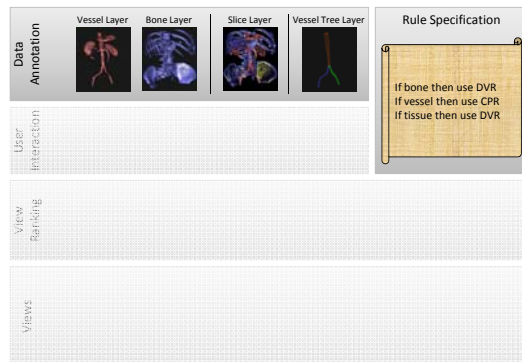

- Rules stored in an external file
- Adapted to specific demands of users
- Defined by domain experts
- Flexible extension by adding new rules
- Human readable form

Gabriel Mistelbauer

19

Smart Super Views

Gabriel Mistelbauer

20

User Interaction

- User defines a ROI by moving the mouse
- Compute input values for all variables
- Layers are used inside the ROI

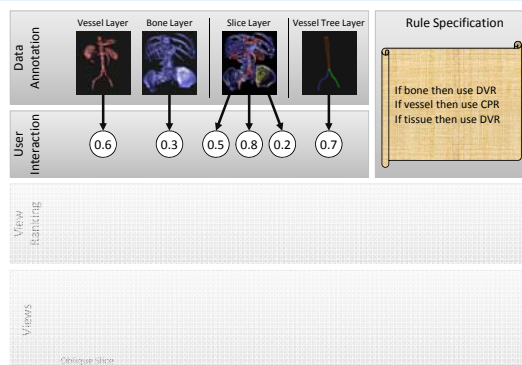

- One value for every input variable
- Sum over all pixels inside the ROI
- Pixels weighted with distance to center
- Specific layers for input variables

Gabriel Mistelbauer

21

Smart Super Views

Gabriel Mistelbauer

22

View Ranking

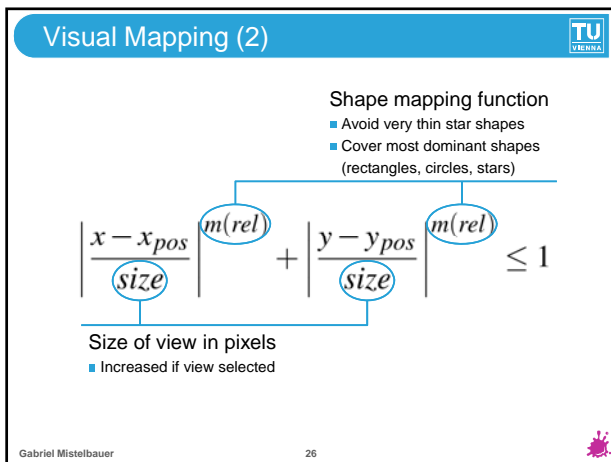

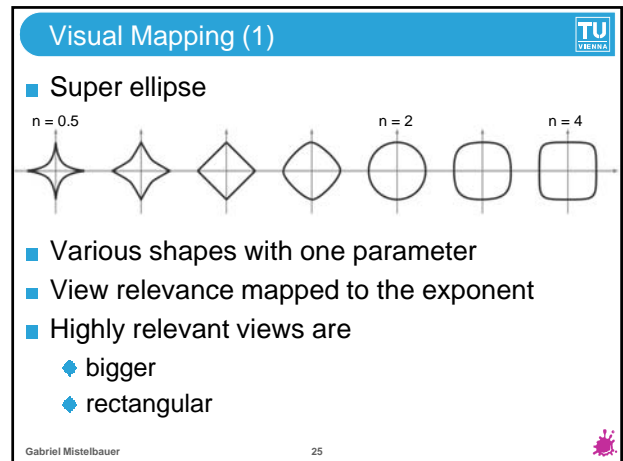

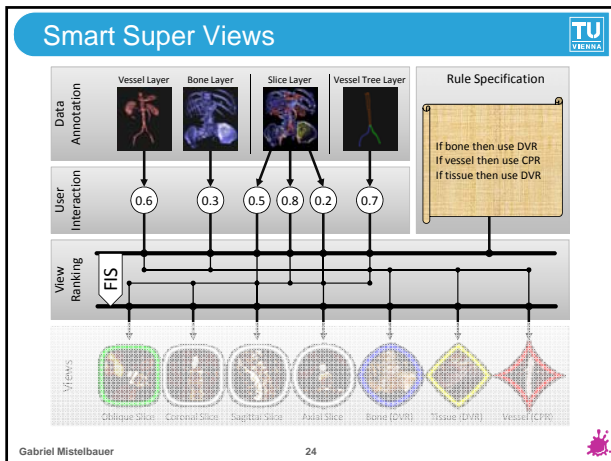

- Fuzzy logic for the inference system
- ⇒ Fuzzy Inference System
- ⇒ Fuzzy rules specified by domain experts

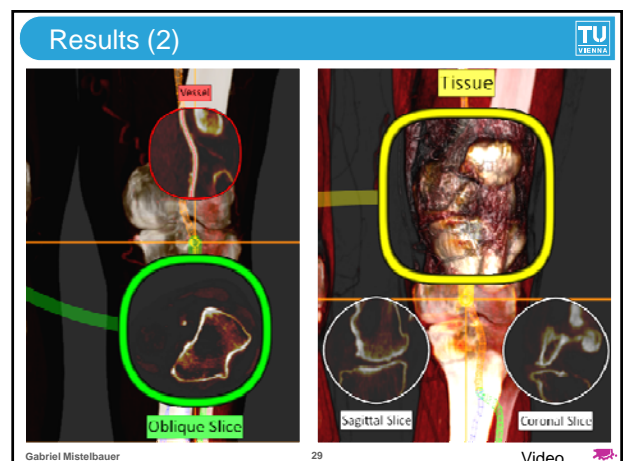

Gabriel Mistelbauer

23

Results

Gabriel Mistelbauer 27

Smart Super Views - Conclusion

- Provide intelligent views
- Image becomes the user interface
- Deployable as an addition to the PACS workstation
- Applicable to other scenarios
 - ◆ Geo maps
 - ◆ CAD programs

Gabriel Mistelbauer

31

Feedback

Gabriel Mistelbauer

33

Feedback

- Smart Super Views provide
 - ◆ only relevant views
 - ◆ more interaction than static images (seen as fairly easy)
 - ◆ intuitive discrimination of views (with basic knowledge of underlying algorithms)
- Interaction: zooming, rotating, panning, windowing function, transfer function
- Additional view in a radiologists workflow

Gabriel Mistelbauer

34

Scenarios (1)

- MIP or CPR solely not sufficiently accurate
- Some pathologies might remain unrevealed
- Most accurate is MIP + axial slices
- Provided by defining proper rules
- Axial slice image always highly relevant when using MIP or CPR

Gabriel Mistelbauer

35

Scenarios (2)

- Interdisciplinary medical discussion rounds
 - ◆ Radiologist
 - ◆ Clinician
 - ◆ Surgeon
- Different requirements and perspectives
- Encoded within specific rules

Gabriel Mistelbauer

36

Conclusion

- Provide intelligent views
- Image becomes the user interface
- Deployable as an addition to the PACS workstation
- Applicable to other scenarios
 - ◆ Geo maps
 - ◆ CAD programs
